

Class 42 Terraform for_each+Map

Foreach+Map

RG ALG ALG REGION ME
BANA NA HAIN..

```
rg_names=
{
  "rg1"="central india"
  "rg2"="central us"
  "rg3"="central canada"
  "rg4"="south india"
  "rg5"="west india"
}
```

```
rg_names=
{
  key=value
  key=value
  key=value
  key=value
  key=value
}
```

arguments

5 rg

Name & Location

rg_names=["rg1","rg2","rg3","rg4","rg5"]

Comman Location

Central canada

MAP me hamesha key string type hota hai...value kuch bhi type ka ho sakta hain (string,number,bool,list,set,map)

for_each

input=

Set of string

rg_names=["rg1","rg2","rg3"]

Jitne set me elements hote hai utni baar loop chalega

Map

```
rg_names=
{
  "rg1"="central india"
  "rg2"="central us"
  "rg3"="central canada"
}
```

Jitne Map ke ander key honge utni baar loop chalega

=input

Input=

```
rgs={
  "East US" = "rg1"
  "West Europe"="rg2"
  "Southeast Asia"= "rg3"
}
```

```
resource "azurerm_resource_group" "rgs" {
  for_each = var.rgs
  name     = each.key
  location = each.value
}
```

"East US"

```
resource "azurerm_resource_group" "rgs[rg1]" {
  name     = each.value
  location = each.key
}
```

each.key="East Us"

each.value="rg1"

"West Europe"

```
resource "azurerm_resource_group" "rgs[rg1]" {
  name     = each.value
  location = each.key
}
```

each.key="West Europe"

each.value="rg2"

"Southeast Asia"

```
resource "azurerm_resource_group" "rgs[rg1]" {
  name     = each.value
  location = each.key
}
```

each.key="Southeast Asia"

each.value="rg3"

Input

Nested Map

```
rg_names(varibale name)={
  rg1(key)=value{
    rg_name(key)=value"cloud-rg1"
    location(key)=value"central Inida "
    managed_by(key)=value "terraform"
  }
}
```

Child Modules
